

Cheese and Dairy

Experiences:

Cheese production
Pasteurization
CIP Systems
Packaging
Inventory Tracking

For years, IAE has worked in the dairy industry performing process control on many types of systems. We have worked with systems spanning from general cheese production to packaging and inventory tracking. Many of our cheese projects have been related to the grinding areas, oven control systems, cookers, CIP systems, among many others.

Our staff has additional experience in UHT and HTST pasteurization controls in the dairy industry.

Many of our projects involve enterprise level integration that ties the production-related information to your business system to empower you with key real-time process information.

Our cheese and dairy experience makes IAE the right choice to partner with for any integration or turnkey project needs you may have.
