

Flour Milling

IAE has done extensive work in the flour milling industry across the United States. We have commissioned systems spanning electrical & control system design and integration to complete turnkey projects.

We have helped plants increase production rates while improving quality while bringing the production costs down. We have been able to implement many different control strategies to tailor the systems to accommodate each specific site. We are also able to empower a plant with key real-time production information in order to make decisions based on their current production situation.

Whatever your flour milling needs may be, IAE is the right choice to partner with to perform your integration services.
